

## Remodeling Magazine: Around the House

Publication date: March 1, 2008

### **Mr. Bamboo.**

The maker's *strand-woven bamboo flooring* is made of bamboo fibers compressed into strands under intense cold pressure, then bonded with a heat-sensitive low-VOC adhesive. All of the harvested bamboo is used during this process. The resulting “strand-woven” look offers a rich texture and unique graining on each finished piece. Available in either amber-coffee or natural-blond colorways and a vertical or horizontal grain, the flooring is sealed on all sides and prefinished with an anti-scratch topcoat.
